Grand Hotel Adriatic

Aleks Buvač is the CEO of Own.Solutions, a technology company with over 20 years of experience in developing solutions for companies such as FlixBus, Aircash, and many others. For over two years, he has been leading the company's strategic shift toward AI solutions for business process automation and is actively involved in the development and implementation of AI systems across various industries, with a focus on compliance-driven environments

Tools, Platforms, and Methodologies for AI Applications Development

The presentation provides an overview of key tools, platforms, and methodologies for AI application development, with a focus on what is often missing in practice: the transition from demonstration-level solutions to production deployment.

Based on real-world implementation experience across multiple industries, it highlights common challenges faced by SMEs, including insufficient data preparation, lack of system-level design, and absence of governance mechanisms.

Special emphasis is placed on connecting AI models with internal data and real business processes. The session introduces a practical framework for building AI systems that deliver measurable business impact through process automation, improved efficiency, and better access to information. The goal is to provide actionable guidance on how SMEs can implement AI solutions in a sustainable, secure, and business-aligned way.
